Websites Commonly Used In School

At the Whinless Down Academy Trust, children are encouraged to use certain websites to help them with their learning. This can include child-friendly search engines or websites that relate to a topic the children are studying.

Kid Rex

Children use this child-friendly search engine for research and for finding pictures to put into presentations or desktop publishing projects.
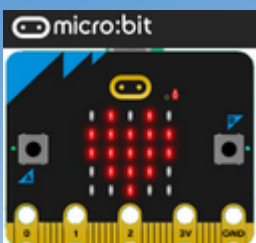

Kiddle

Kiddle is an alternative child-friendly search engine with the same function as Kid Rex.

Scratch

Scratch is used in Key Stage 2 to teach programming skills using block coding.

Microsoft Makecode (Microbit)

In Key Stage 2, the Makecode website allows the children to create exciting programming projects with our Microbit minicomputers. This develops skills learnt in Scratch.
