

Here is a grid of four boxes:

You must choose four **different** digits from 1 - 9 and put one in each box.
For example:

5	2
1	9

This gives four two-digit numbers:

52 (reading along the first row)

19 (reading along the first row)

51 (reading down the left-hand column)

29 (reading down the right-hand column)

In this case their sum is 151.
